

SYSTEM AND METHOD FOR CONTROLLING ACCESS TO INTERNET SITES

Abstract of the Disclosure

A method and system for providing flexible access to Internet sites is described. The system includes a database of Internet sites that have been categorized so that the system determines the category of information that a user is accessing on the Internet. The system is also programmed so users are only allowed to access sites within a particular category a limited number of times. Moreover, users can requested a postponed access, wherein the site they are requesting is stored to a server, and available to the user at a later time. In addition, if a user chooses to access a site that is within certain predefined categories, they are presented with the option of retrieving the page, but notified that their access will be logged to a file.
